

## Software Development Fundamentals Lab – I [24B15CS111]

### Lab 5

**NOTE: All students must submit the programs (code with running output) of this assignment in doc format to their respective faculty of Lab. as per the file naming convention Enrollment No.\_Assignment No.**

|        |                                                                               |
|--------|-------------------------------------------------------------------------------|
| C172.1 | Develop programs/logic for data types, expressions and conditional structure. |
|--------|-------------------------------------------------------------------------------|

1. Write a program to input a number and check positive, negative or zero using switch case.
2. Write a program to create a simple calculator which performs addition, subtraction, multiplication and division operations on two input numbers using switch case.
3. Write a C program to find all roots of a Quadratic equation using switch case.
4. Write a program in C to read any Month Number in integer and display Month name in the word. (Using Switch case)
5. Write a C program to operate single character by using switch statement.
6. Write a C Program that will take an integer number from user as input then print the table of that number using for/while/do while loop.
7. Write a C program to print sum of digits of a number entered by a user using for/while/do while loop.
8. Write a C program to find sum of odd numbers between 1 to n, where n will be given by user (using for/while/do while loop).
9. Introduce Simulation of Loops using Virtual Labs for Factorial Calculation and Height of Pyramid.
